

## MODEL PV-800 DHO "Power-Vac" Product Information Sheet

Industrial Vacuum Systems / Valve Operators

Model at right equipped with 100 gal. water jet system, hose support boom, and large dump hatch with lift. It also has our hi-output 37 HP 825 CFM drive package.

The PV-800 DHO has an 800 gallon (4 cu. yd.) debris tank with hydraulic dump. The WJ3500 water jet cutting and cleaning system on the unit pictured make an easy job of excavating holes in hard soils and clay. The unit is mounted on a 5' x 14' trailer with a 14,000 lb. GVW rating. Operator convenience features like hose storage racks, low mounted "centri-clean" filter, tank water washdown system and rear hatch lift system make the "Power-Vacs" the preferred choice. Plus, they are second to none in the vacuum power available to do work.

### STANDARD FEATURES ON ALL "Power-Vacs":

- 2-part hi-buildup epoxy finish on tank and skid.
- Skid built vac can be mounted on truck bed or trailer.
- Oversized Acoustical & Baffled Silencer for quieter running and maximum performance.
- Convenient remote mounted "Centri-clean" filter system for easy maintenance.
- Full flow piping and pickup hose for maximum performance. (4" on above model)
- Widest drive options available. Gas, Diesel, Propane, Electric, or Hydraulic.
- Non-conductive pickup tubes, fittings, and hose connections replacement or additions from local hardware stores for economical and safe operation.

If your application calls for excavating holes to locate underground utilities safely, cleaning underground vaults or valve boxes, there is a "Power-Vac" that can make your job easier. It can pick up mud, water, rocks, and other solids up to 4" in diameter from as far down as 25 ft. Choose from 4 different tank sizes, 3 horsepower ranges, and select accessories to fit your needs.
