The ultimate hand-portable cable-test tool for cable television and telecoms industries. At 3 metres it combines the shortest distance with a highly practical 12 kilometre long range.

Automatic fault-finding is a simple touch-button operation enhanced by high resolution display. Faults and high reflective features are evaluated by a unique Return Loss Measurement function.

This also provides a useful test method for contractors to demonstrate that connectors, taps and other cable work meets International Standards.

A total of thirteen operating ranges with zoom facility includes very short pulse widths to identify cable features that are close together or nearby. These can be measured using the twin cursors.

Genuine 2ns sine-squared pulse gives ultimate fault resolution.

Pulse widths can be selected automatically for ease of fault location, or may be selected manually for uniform Return Loss Measurement.

PC compatibility ensures waveforms can be analysed, stored and re-loaded for on-site, dynamic comparison of the waveforms when testing coaxial, CATV, CCTV and data cable systems.

Dedicated function keys, help menu and clear display make the T631 easy to use.

Dedicated mains blocking filter accessory gives high resolution fault location on LV mains cables.
